cc sequence which encodes a foreign epitope or antigen. Also described are:
(1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended
cc assembly system of strains of Salmonella, Escherichia coli and
cc Enterobacteriaceae for the production of fimbriae comprising recombinant
cc AgfA, CsgA and AgfA-homologue fimbria subunits, respectively; (2)
cdirecting recombination of a recombinant gene into the chromosome of the
homologous species; (3) directing recombination of a recombinant
cc back into the chromosome of the homologous species, replacing the native
cc copy of that gene; and (4) eliciting an immune response in an animal,
cc comprising separating a maino acid polymer comprising a recombinant AgfA
protein containing a replacement segments of foreign amino
cc acid sequence or sequences grown on a Salmonella, E. coli or
cacid sequence or sequences grown on a Salmonella, E. coli or
conjymer into the animal in conjunction with a carrier or diluent. (I) is
custing an immune response in an animal. In a fimbrial precentation
cs system the heterologous antigens are presented in high numbers (up to
conjourned to the carrier fimbrial subunit proteins are usually strong
c immunogenicity and adhesion properties relevant for an efficient live
vaccine, the carrier fimbrial subunit proteins are usually strong
c immunogens, which may be important for directing an immune response
                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

                                                                                                                                                                                                                                                                              The invention relates to an isolated peptide capable of binding a mammalian plasma protein or of generating an immune response in a mammal selected from sequences shown in ABR02642, ABR026449. The peptide or antibody is useful for treating a bacterial infection in a human or animal or in the manufacture of a medicament for the prophylactic treatment of a bacterial infection, such as Escherichia coli, Salmonella or Shigella infection. The peptide that is immobilized on a solid support is also useful as a reagent for determining the ability of a plasma protein to bind to bacteria. The present sequence represents an E. coli 15 kDa protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New isolated peptide capable of binding a mammalian plasma protein, useful in the manufacture of a medicament for the prevention and/or treatment of a bacterial infection, such as Escherichia coli, Salmor or Shigella infections.
                                                                                                                                                                                                                                                    Sequence 151

            Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Score

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           US-09-252-991A-27661
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 3, Application US/08864038A

Sequence 3, Application US/08864038A

Patent No. 6001592

GENERAL INFORMATION:

APPLICANT: Kunio NAKASHIMA et al.

TITLE OF INVENTION: NOVEL POLYPEPTIDE GENE CDNA, VECTOR

TITLE OF INVENTION: CONTAINING SAID CDNA, HOST CELLS TRANSFORMED WITH SAID

TITLE OF INVENTION: VCCTOR, POLYPEPTIDE PRODUCED THEREBY, METHOD OF PRODUCING

TITLE OF INVENTION: SAID POLYPEPTIDE, DNA ENCODING SAID POLYPEPTIDE AND ANTIBODY
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      NUMBER OF SEQ ID NOS:

S70797
Curlin nucleator protein csgB precursor - Escherichia coli (strain K-12)
N;Alternate names: csgB protein; curlin nucleation component; minor curl
C;Species: Escherichia coli
C;Date: 12-Feb-1998 #sequence_revision 20-Feb-1998 #text_change 01-Mar-2
C;Accession: S70787; F64846
C;Accession: S70787; F64846

-!- SUBCELLULAR LOCATION: Outer membrane (By similarity).
-!- DOMAIN: CONTAINS 153 IMPERFECT REPEATS OF THE CONSENSUS OCTAPEPTIDE A-G-Y-G-S-T-L-T; FUNTHER ON A 16-RESIDUE AND A REGIONAL 48-RESIDUE PERIODICITY IS SUPERIMPOSED.
-!- MISCELLANBOUS: A STRUCTURAL MODEL IS SUGGESTED IN WHICH THE ICE NUCLEATION PROTEIN DISPLAYS A SYMMETRY RELATED TO THAT OF ICE.
-!- SIMILARITY: Belongs to the bacterial ice nucleation protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Xanthomonas campestris pv. transluc Mol.
